Animals are multicellular eukaryotic organisms that form the biological kingdom Animalia. With few exceptions, animals consume organic material, breathe oxygen, are able to move, can reproduce sexually, and grow from a hollow sphere of cells, the blastula, during embryonic development. Over 1.5 million living animal species have been described—of which around 1 million are insects—but it has ...

Animals are multicellular eukaryotic organisms that form the biological kingdom Animalia. With few exceptions, animals consume organic material, breathe oxygen, are able to move, can reproduce sexually, and grow from a hollow sphere of cells, the blastula, during embryonic development. Over 1.5 million living animal species have been described—of which around 1 million are insects—but it has  
Shark Wikipedia  
Modern sharks began to appear about 100 million years ago. Fossil mackerel shark teeth date to the Early Cretaceous. One of the most recently evolved families is the hammerhead shark family Sphyrnidae, which emerged in the Eocene. The oldest white shark teeth date from 60 to 66 million years ago, around the time of the extinction of the dinosaurs. In early white shark evolution, there are at least two lineages.

Tissue invasion and metastasis Molecular biological and 2 Cellular properties and metastasis  
2 1 Cell–cell adhesion In cancers derived from the epithelium, intercellular structures and cell–cell adhesion are key factors in maintaining a coherent primary tumor mass. Abnormalities in these structures through mutation or dysregulation can lead to the dissociation of the primary tumor and an enhanced potential for dissemination and metastasis.
